

1. Install Node.js: <https://nodejs.org/en/>
2. Install vscode: <https://code.visualstudio.com/Download>
3. Open vscode -> Open folder -> choose Desktop or wherever you want to work
4. In vscode, in the top menu, go to: Terminal -> new terminal, then type:

```
1. git clone https://github.com/shaharjacob/learning-react.git
2. cd learning-react
3. pip install -r requirements.txt
4. python runme.py
```

It will take a while, since the model we download a small model for sentence embedding.

If everything is good, you should see the output: 0.925

5. now, again in the vscode terminal, type:

```
1. cd webapp
2. npm install react-vis-network-gnpmraph
3. npm install @material-ui/core
4. npm install react-router-dom
5. npm start
```

If npm is not recognize in vscode, restart your computer.

It should open your browser at <http://localhost:3000/> , if not, open your browser and type it.

If everything installed properly, you should see:
